

Java Practice Work – Inheritance (Basic Level)

Question: Vehicle Management using Inheritance

No	Requirement
1	Create parent class Vehicle with variables: brand (String), speed (int)
2	Create method displayVehicleDetails() to print brand and speed
3	Create child class Car extends Vehicle
4	Add variable fuelType (String)
5	Create method displayCarDetails() to print brand, speed, fuel type
6	Create child class Bike extends Vehicle
7	Add variable mileage (double)
8	Create method displayBikeDetails() to print brand, speed, mileage
9	In main(), create 1 Car and 1 Bike object
10	Assign values directly and call display methods
11	Do not use super()

Sample Input

Car:
Brand: Toyota
Speed: 120
Fuel Type: Petrol

Bike:
Brand: Yamaha
Speed: 100
Mileage: 45.5

Expected Output

Car Details

Brand: Toyota
Speed: 120
Fuel Type: Petrol

Bike Details

Brand: Yamaha
Speed: 100
Mileage: 45.5
