

RISE – Every Step Towards Success

Java Weekend Batch – Week 2 Homework / Practice

This homework is based only on what we have covered so far: **System.out.println()**, **variables**, and **Scanner + nextLine()**. Do **any 5 tasks minimum**. For each task, submit **2 screenshots**: (1) code (2) output.

Note: For input tasks, type exactly like the sample (each input on a new line).

Task 1: My Intro (println only)

Using only **System.out.println()**, print 4 lines: your name, your city, your favourite food, and “I am learning Java”.

Test Case	Sample Input	Expected Output
1	No input	Reshma Chennai Biryani I am learning Java
2	No input	Arun Dubai Mandi I am learning Java

Task 2: Star Pattern (println only)

Print star pattern using only **println**. Do it for BOTH test cases:

- Test case 1: 3 lines of *****
- Test case 2: 4 lines of *****

Test Case	Sample Input	Expected Output
1	No input	***** ***** *****
2	No input	***** ***** ***** *****

Task 3: Java Execution Flow (println)

Print the Java flow in one line, then print 3 simple meaning lines for Compiler, Bytecode, and JVM.

Test Case	Sample Input	Expected Output
-----------	--------------	-----------------

1	No input	.java -> compiler -> .class -> JVM -> output Compiler means: checks code and converts it Bytecode means: .class file created after compile JVM means: runs the .class and gives output
2	No input	.java -> compiler -> .class -> JVM -> output Compiler means: converts Java source to bytecode Bytecode means: intermediate code (.class) JVM means: executes bytecode

Task 4: Store & Print (Variables)

Create variables: **String name**, **String city**, **String course**. Print them in separate lines with labels (Name:, City:, Course:).

Test Case	Sample Input	Expected Output
1	No input	Name: Reshma City: Chennai Course: Java
2	No input	Name: Ayaan City: Dubai Course: Java

Task 5: Change the Value (Variables)

Create **String city**, print it, then change the value and print again. Goal: understand that variable values can change.

Test Case	Sample Input	Expected Output
1	No input	City before: Chennai City after: Dubai
2	No input	City before: Kochi City after: Trivandrum

Task 6: Scanner Input (1 input – nextLine)

Use **Scanner** and **nextLine()**. Ask user for name and print: "Hi <name>, welcome to Java!"

Test Case	Sample Input	Expected Output
-----------	--------------	-----------------

1	Reshma	Enter your name: Reshma Hi Reshma, welcome to Java!
2	Arun	Enter your name: Arun Hi Arun, welcome to Java!

Task 7: Scanner Input (3 inputs – nextLine only)

Ask user for: name, college, department (all using **nextLine()**). Print a profile card.

Test Case	Sample Input	Expected Output
1	Reshma SIMATS CSE	Enter name: Reshma Enter college: SIMATS Enter department: CSE --- Profile --- Name: Reshma College: SIMATS Department: CSE
2	Ayaan BITS ECE	Enter name: Ayaan Enter college: BITS Enter department: ECE --- Profile --- Name: Ayaan College: BITS Department: ECE

Task 8: Feedback Input (Fun – nextLine only)

Ask: "What did you understand today in one line?" Take input using **nextLine()** and print: "Your feedback: ____"

Test Case	Sample Input	Expected Output
1	I understood class and main method.	Enter your feedback: I understood class and main method. Your feedback: I understood class and main method.
2	JVM runs the .class file.	Enter your feedback: JVM runs the .class file. Your feedback: JVM runs the .class file.

Task 9: Revision (No coding) – One-line answers

Write answers in 1 line each (send as text message / notebook):

- 1) What is a class?
- 2) What is main method?

3) What is JVM?

4) What is JDK?

Test Case	Sample Input	Expected Output
1	No input (write answers)	1) Class: A blueprint/container for code. 2) Main: Starting point of Java program. 3) JVM: Runs bytecode (.class) and gives output. 4) JDK: Tools to write + compile + run Java.
2	No input (write answers)	1) Class: A structure where Java code is written. 2) Main: Method where execution starts. 3) JVM: Executor of Java programs. 4) JDK: Full kit for developing Java programs.

Tip: If you face errors, send a screenshot of the error + your code. We will fix it in class.
