

Java Basics – Saturday Class Notes (Week 3)

Hi everyone ■

These notes are to give you an idea of what we will be covering in Saturday's class. You are **not expected to learn or memorize** everything now — please read once calmly. I will explain each topic **step by step with real-life examples** during the session.

1. Output in Java (Printing)

To display anything on the screen, we use print statements.

In class, I will explain these 3 types:

- **System.out.println()** — prints and goes to the **next line** (most used)
- **System.out.print()** — prints in the **same line**
- **System.out.printf()** — used for **neat formatted output** (bill / marks / salary format)

2. Input in Java (Scanner)

Programs become more useful when they take input from the user. We will use **Scanner** to read what the user types in the console.

In class, I will show the most important input methods:

- **nextLine()** → String text input (name, city, sentence)
- **nextInt()** → whole numbers (age, quantity)
- **nextDouble()** → decimal numbers (price, salary)

Important: After taking number input, sometimes String input gets skipped — I will show the correct fix in class.

3. Operators (Doing calculations in Java)

Operators are symbols used to perform calculations.

We will learn these basic operators:

- **+ - * / %** (arithmetic operators)

Example: *total = price * quantity*

- **Increment & Decrement**

- **++** (increase by 1)

- **--** (decrease by 1)

I will explain when and why we use these with simple examples.

4. What we will build in class (Mini Program)

By the end of Saturday class, we will write a small program that:

- takes input from user
- does calculation using operators
- prints output neatly

Important Note

If you face any installation or input issues, **do not panic**. I will guide you step by step in class.

■ **By the end of the class**, you will be able to:

- take input using Scanner
- use operators to calculate
- print output using different print statements

That itself is a big achievement for beginners ■■
