

Java Basics – Sunday Class Notes (Week 3)

Hi everyone ■

These notes are to give you an idea of what we will be covering in Sunday's class.

■ You are **not expected to learn or memorize** everything now — just read once calmly.
I will explain each topic **step by step with real-life examples** during the session.

Part 1: Practice (Using Saturday concepts)

In the first part of the class, we will practice writing small programs using:

- Scanner input
- Variables
- Operators
- Print statements

Programs we will build in class:

1) Student Profile Program

- Take name, age, city as input
- Print output neatly

2) Bill Calculator Program

- Take product name, quantity, price
- Calculate total amount
- Print bill output clearly

3) Simple Calculator Program

- Take two numbers
- Perform +, -, *, /, %
- Print results

Part 2: Decision Making (if / else)

After practice, we will start the next important concept:

- if
- if-else

I will explain:

- What is a condition
- How programs take decisions
- Why we use if/else in real applications

Comparison operators we will use:

- > < >= <= == !=

Programs we will do using if/else:

- 1) Even or Odd
- 2) Biggest of two numbers
- 3) Pass or Fail using mark

Important Note

Don't worry if you feel confused while reading. Everything will be explained slowly in class. You can ask doubts anytime — there are no silly questions ■

■ **By the end of the class**, you will be able to:

- write small programs confidently
- use if/else to make decisions
- solve beginner-level problems using Java
